

# Sensor technology could yield peace of mind

Water and temperature sensors to help reduce worry at your business

Buildings and businesses come in many different shapes and sizes but share many common risks associated with water. Imagine a business opening to a burst pipe or leaky water heater. You could be facing a claim for damage and clean-up, not to mention the impact of the disruption to your business.

But what if you had sensors that could send a text or email alert telling you there was an issue?

## Here are some reasons to put sensor technology to work for you:

- Avoid water damage from water leaking fixtures, appliances or pipes, especially bathrooms and sinks
- Monitor refrigeration temperatures for walk-in or reach-in refrigerators to avoid loss of perishables
- Avoid damage when extreme humidity creates an environment conducive to mold
- Get alerts in the event of a power outage

Great American is working with HSB to make this a reality by providing you with a valuable early warning system that uses the latest IoT technology to detect water and send timely alerts.

## How the IoT Solution Works
